To Whom it May Concern:

With over five years of full-stack web development and design experience for many different businesses, I believe I offer the technical experience and creative knowledge that you are looking for at your company. I currently live in Cleveland, Ohio but will be relocating to southern California by the spring time, and I am actively looking for a remote position with a fun, modern, and challenging company where I can put my skills and passions into all my work.

Since I was sixteen years old, I've been working on web development. The passion started with a course I took while enrolling in a dual-credit program in high school with a local community college. After that, I fell in love with this field, and I began to learn as many programming languages I could to master my skills and become the full-time, passionate, and dedicated web developer I am today.

I earned my Bachelor's degree from Cleveland State University in Psychology, which I believe gives me a unique approach to user experiences and how people respond to user interfaces. In my resume, you will see I've detailed my skills, which include:

1. **Web Development** using HTML5, CSS3, JavaScript (libraries and frameworks), PHP, Ruby/Rails, and Adobe Creative Cloud.
2. **Translating ideas into wireframes and prototypes** that I use to create accurate, pixel-perfect, and responsive code.
3. **Using responsive web development frameworks**, like Bootstrap and W3CSS. In today's day and age, it's imperative to make sure everything looks beautiful on any device it's viewed on.
4. **UX and UI design projects** that include wireframing and focusing on improved load time, positive user experiences, and user engagement.
5. **SEO initiatives** – making sure each website is written in a cohesive way so that search engines like Google can find the company.
6. **WordPress (and other CMS platforms) development** – WordPress is powerful and popular, and there is a reason so many people love having their websites created with WordPress. I make sure my clients get the best of the best, and this is one of the areas of expertise I can offer them.

Many of my other skills are highlighted in my resume for you to view. As a web developer, I focus on positive consumer responses, and manage everything that goes into a project – concept ideas, wireframes, design, development, launching, maintenance, and user support.

I look forward to hearing from you all and believe I would excel in this position. Please feel free to contact me at (440) 728-4129 or karli@sensibello.com to discuss this position further or schedule a meeting. In addition, please feel free to view my BeHance and Github I've included above to see my work and projects.

Sincerely,
Karli Sensibello
